

## Zelfo Technology 'Fibre Engineering Centre Underway'

June 2016

A decision has recently been taken to relocate Zelfo Technology GmbH development facilities to Brandenburg, where the head office has been sited for the last 4 years. Further key decisions regarding Zelfo Technology's services were also taken.

These include:-

1.  
The establishment of a dedicated natural 'Fibre Engineering Centre' (FEC) where client based process development as well as end materials based projects will be carried out.
2.  
Micro Fibrillation of fibres will be only one part of a wider spectrum of several fibre engineering programs.
3.  
The term 'Zelfo' will relate to the company brand only, all processes and end materials will be known as 'engineered fibre' technology & products.
